

Track A: Basic Science

Marlène Bras, Switzerland

Marlène Bras completed her PhD in 2006 at the Pasteur Institute in Paris, France, where she studied the molecular mechanisms of programmed cell death in B-cell chronic lymphocytic leukaemia. She later worked as a postdoctoral fellow in the Biochemistry Department of the University of Lausanne in Switzerland, studying the negative regulation of the immune system. From 2009 to 2013, Marlène worked as a research scientist at the Pasteur Institute in the HIV field. Her research focused primarily on the impact of HIV-1 on NK-pDC crosstalk and the consequences on both viral innate immunity and cell death. Marlène is the Executive Editor of the Journal of the International AIDS Society, a peer-reviewed and open-access journal for the generation and dissemination of evidence from a wide range of disciplines: basic and biomedical sciences; behavioural sciences; epidemiology; clinical sciences; health economics and health policy; operations research and implementation sciences; and social sciences and humanities.
